WIDOWHOOD BOXES

This box, which can be used both for widowhood and for breeding, offers the pigeon fancier the ideal conditions for a successful racing season. Quality and functionality rank first. For the body, we use a 16 mm thick spruce natural wood panel. Only natural glue is used in the production of this panel.

Furthermore, the spruce natural wood panel absorbs significantly more moisture than other materials.

Our front doors are made of pine solid wood and are expertly connected with mortise and tenon. The seat strips are made of beech hardwood. The powder coated wire grids are chamfered front and rear. This provides additional stability.

Due to the arrangement of the box compartments next to one another and the mutual opening of the compartments, the pigeons can orient themselves much better than in a box with only one front door. Furthermore, two pigeons can always be locked separately from each other. This is very important when mating.

The fact that we offer these boxes in five different sizes ensures that they fit practically into every pigeon loft. For better orientation, we offer front doors in four different colors. These boxes have proved to be extremely successful with top breeders at home and abroad.

THE FOLLOWING VARIATIONS ARE AVAILABLE FOR THE SEPARATION DOOR IN THE CENTER OF THE BOX:

- Separation door with pass rear
- Separation door with pass front
- Motivation separation door for dimming
- For space saving storage, the box inset can be collapsed.

THE FOLLOWING VARIATIONS ARE AVAILABLE FOR THE FRONT GRILLES:

- Front door with color filling
- Front door with natural filling
- Front door with bars

MOTIVATION BOXES WITH DARK SECTION

This box offers the pigeon fancier many possibilities of motivation during the racing season.

The basis of this box is the widowhood box with two compartment, which has been tried and tested over many years. The advantage of the motivation box with dark section is, a depth-adjustable closed front door with color filling. This door can be opened or closed by means of a slider.

In the middle of the box there is a motivation separation door in order to completely darken the box half. The separation door is provided with a viewing opening, which can be opened or closed as required.

The lower figure shows the box in plan view. Here one can recognize the in depth-reduced box half with dark section. The small slider of the separation door in the center of the box is open so that the cock can see the hen after returning home. To open the dark section, pull the large slider of the separation door forward.

MOTIVATION BOX WITH THREE SECTIONS

The motivation box with three sections is an extension of the widowhood box. With a box width of 94.2 cm, three box compartments are arranged next to each other. Thus, in this box, two hens and one cock or two cocks and one hen can be placed together. The compartments are each separated from one another by a separation door with pass. All separation doors can be individually opened or elevated.

BREEDING BOXES

For further information, please visit: www.hermes-pigeons.com

This specially designed box offers you the best conditions for the successful breeding of your pigeons.

The breeding box includes an additional floor for the second nest bowl and two front doors, one of which is provided with a height-adjustable plywood screen. This slider can be placed up or down on the frame, depending on where the young birds are. The screen should always be set in such a manner that the young birds lie in the open part of the box. This arrangement of the slider ensures optimal ventilation of the boxes.

For difficult mating cases, we offer an intermediate frame. This separation door allows the pigeons to be locked under the intermediate floor. By arranging the nest bowl on top of each other, the second half of the box is entirely available for the mating of the pigeons. The result is a 100% fertilization rate as well as no crushing of the eggs.

INFO BOX:

With conveyor belt Article no. 304

Cabinet height from 185 cm to 195 cm

Cabinet depth 57 cm

Box height 52 cm

Box width: 64,2 / 69,2 / 74,2 / 94,2 cm

BIG BREEDING BOXES

This breeding box is a larger version of our longstanding greatly successful breeding box. In the large breeding box, only two boxes are arranged one above the other. This results in a much more comfortable box height. The cabinet depth is also five centimeters larger for these boxes. As a result, the breeding couples can also be fixed temporarily, thus a cross fertilization can be excluded.

With these breeding boxes a high-quality feeding trough with compartmentation and a drinking trough with wood mounting are included.

DUAL PURPOSE BOXES

In contrast to the conventional Hermes widowhood box, this box has only one swivel frame with a pass. Due to the patented swivel hinge, the frame can be moved from front to rear with a handle.

The four different box sizes offer the breeder the possibility to use this box as a widowhood box, a young bird box, a hen box and in the size of 59.2 cm even as a breeding box!

For an additional charge the dual purpose box can be provided with fronts in different colors.

In addition, we offer the following variations:

- Separating piece to separate in the middle
- Inset for three seats
- Approaching plank for additional motivation

With conveyor belt Article no. 301

Cabinet height from 185 cm to 195 cm

Cabinet depth 62 cm

Box height 34 cm

Box width: 36,4 / 43,2 / 49,2 / 59,2 cm

DUAL PURPOSE BOXES WITH A SOLID FLOOR

With this dual purpose box a fixed intermediate floor is installed. There is no wire grid and no manure drawer to pull out. This is the somewhat cheaper alternative to the conventional dual purpose boxes Art. no 302. The advantage is that the five boxes can be arranged one above the other.

INFO BOX:

YOUNG BIRD BOXES

This box can be used as a young bird box with a nesting section, as a seat shelf with two seats or even as a small widowhood box. The cabinet depth is 52 cm. This box can be used as a young bird box with a breeding burrow, as a seat shelf with two seats or even as a small widowhood box. Trouble-free, the front grille can be elevated to create a conventional shelf with a width of 26.3 cm.

This box is excellent for young pigeons and single birds so described also as widowhood box. There are two front doors and one separation door.

YOUNG BIRD PERCHES AND WIDOW-HEN PERCHES

This shelf is available with and without manure belt. The sizes 20.2 and 23.2 cm are suitable for young pigeons. For hens, the narrow sizes with 16.2 or 18.2 cm have proved their best. In addition, an inset can be installed in these places, which prevents two hens from being able to mate. The wire grids are arranged in such a way that the rods run from the front to the rear. This prevents the feces from settling on the grids. As a standard feature, the shelves are made of 5 rows one above the other and are equipped with a plinth panel at the bottom.

PIPO PERCHES

This perch offers the pigeon fancier excellent conditions to motivate the young pigeons. There is the possibility to use this cabinet as a perch and young bird pipo perch. A nest bowl can be placed behind the screen. The adjustment of the screen is conducted very easily with a handgrip.

Young bird boxes can also easily be combined with the young bird perches and widow-hen perches.

RACING HEN PERCHES

Accommodation for racing hens with food and water supply. 15 pigeons each can be fixed completely with one door. In addition, there is the possibility that each pigeon can be individually placed inside or removed. Individually placing the pigeons inside or removing them can be easily achieved by simply pushing the front of the box upwards.

- Cabinet height from 185 cm to 195 cm
- Cabinet depth 32 cm
- Seat height 27 cm
- Seat width 23,2 cm

PERCHES FOR HANGING UP

INFO BOX:

- With skewed manure board Article no. 310
- Cabinet height 165 cm with 6 seats high
- Cabinet height 140 cm with 5 seats high
- Cabinet depth 29 cm
- Seat height 25 cm
- Seat width 23,2 cm

INFO BOX:

- As a standard with 2 tipping compartments Art. no 800
- With one tipping compartment and 3 drawers Art. no 801
- Cabinet height 113 cm
- Cabinet width 38 cm
- Cabinet depth 32 cm

With this food container, the boxes can be opened very easily. This facilitates the filling and removal of the feed.

The capacity per box is 25 kg (1 bag of feed). When empty, the tipping compartments can be easily removed.

The food containers are shipped completely assembled.

For a space-saving storage of the food, one unit consists of 2 boxes on top of each other at a time. Multiple rows can be mounted side by side. Instead of one tipping compartment, three drawers can also be installed.
